PROJECTS

Portfolio — HTML, CSS, Javascript

This project is a personal portfolio website designed to showcase my services and projects. It features an responsive design, highlighting key aspects of my work, including past projects, experience, and expertise.

Airline Booking for admins — HTML, CSS, Javascript

This project is an airline booking website for admins designed to streamline the process of booking flights. It features user-friendly functionalities, including the ability to add and delete passengers, manage flight details, and update passenger information.

Grades of Student marks— C programming language

This project in C programming converts student marks into grades based on a predefined grading scale. Users input the marks, and the program calculates the corresponding grade. It simplifies the process of determining student performance.
